Telecommunications Transmission Facilities Master Plan 2012-2013

Telecommunications Transmission Facility Coordinating Committee

Legend

This Master Plan represents a compilation of potential service areas where wireless telecommunications service providers have indicated their interest to place new antennas within the next two years pursuant to § 5 A. 605 of the County Code.

Existing locations and support structures have been approved by the TFFC.

Locations and types shown where there are existing telecommunications antennas or areas where a request for a new site has been approved by the TFFC. These new sites are:

1. New Tower
2. Monopole
3. Building
4. High school and middle school locations (all potential sites for new monopoles)

Target Service Area for New Antennas

Target sites for new telecommunications antennas as designated by wireless telecommunications service providers in their annual plan submissions. If the sites are approved by the TFFC, the antennas may need to be constructed of a new tower or monopole in the area.

1. Some existing antennas may have multiple uses of antennas or towers as different wireless telecommunications service providers.

2. Pursuant to § 5 A. 605 of the County Code, every applicant for building permits or other permits for the erection of telecommunications transmission facilities shall deposit a fee as determined by the TFFC. A location of each existing telecommunications transmission facility and the proposed location of each facility to be constructed is located in accordance with the permit application.

3. The locations shown are not to scale.
